

Northern Maine Crematory)	Departmental
Aroostook County)	Findings of Fact and Order
Presque Isle, Maine)	Air Emission License
A-746-71-B-R)	

After review of the air emission license renewal application, staff investigation reports, and other documents in the applicant's file in the Bureau of Air Quality, pursuant to 38 M.R.S.A., Section 344 and Section 590, the Department finds the following facts:

I. REGISTRATION

A. Introduction

Northern Maine Crematory (NMC) has applied for an renewal to their Air Emission License permitting the operation a Class VIA crematory.

B. Equipment to be Licensed

The incinerator is a Power-Pack II Model IE-PPII cremator unit with the following specifications:

Class Incinerator	IV-A
No. of Chambers	2
Type of Waste	Type 1 & 4
Max. Charging Rate	800 lb per batch
Auxiliary Fuel Input:	
Primary Chamber (MMBtu/hr)	1.5 Natural Gas
Secondary Chamber (MMBtu/hr)	1.5 Natural Gas
Emission Control	Afterburner

The incinerator combustion gases vent to an 18-foot AGL (Above Ground Level) stack. This represents 48% of the formula GEP (Good Engineering Practice) stack height.

C. Application Classification

NMC has not proposed the licensing of increased emissions or the installation of new or modified equipment, therefore the license application is considered a renewal of existing licensed emission sources only.

II. BEST PRACTICAL TREATMENT (BPT)

- A. In order to receive a license, the applicant must control emissions from each unit to a level considered by the Department to represent Best Practical Treatment (BPT), as defined in Chapter 100 of the Air Regulations.

Operating temperature in the secondary chamber or refractory lined stack shall be maintained at or above 1600°F with a stack gas retention time, at or above 1600°F, of at least 1.0 second.

To insure an efficient burn, and to prevent odors and visible emissions, the secondary chamber will be preheated, as specified by the manufacturer, until the pyrometer temperature measures a minimum of 1200°F.

The temperature in the secondary chamber or refractory lined stack shall be maintained at or above 1600°F for the duration of the burn cycle.

A pyrometer and 1/4 inch test port shall be operated and maintained at that location of the incinerator or refractory lined stack which provides sufficient volume to insure a flue gas retention time of not less than 1.0 second at a minimum of 1600°F.

A log will be maintained recording the weight of the waste charged, preheat time, charging time and the temperature of the secondary chamber every 60 minutes after start-up until, and including, final shutdown time. For facilities operating a chart recorder, the start time, date, and weight of waste charged shall be logged on the chart.

Particulate matter (PM) from incinerators is regulated by Chapter 104, however a limit of 0.12 gr/dscf corrected to 12% CO₂ without the contribution of the CO₂ from the auxiliary fuel is more stringent and shall be used.

SO₂, NO_x, CO and VOC emissions were based on AP-42 emission factors for natural gas and BACT data from Mount Hope Cemetery.

Opacity from incinerators is also regulated by Chapter 104, however an opacity limit of 10% (excluding water vapor) on a six (6) minute block average basis, except for no more than one (1) six (6) minute block average in a 3-hour period is more stringent and shall be used.

The incinerator operator(s) shall receive adequate training to operate the incinerator in accordance with the manufacturer's specifications and shall be familiar with the terms of the Air Emission License.

**Departmental
Findings of Fact and Order
Air Emission License**

B. Facility Emissions

The following annual emissions are based on NMC operating Unit #1 a maximum of 2080 hours per year:

Total Allowable Annual Emissions for the Facility
(used to calculate the annual fee)

<u>Pollutant</u>	<u>TPY</u>
PM	0.1
PM ₁₀	0.1
SO ₂	0.1
NO _x	0.7
CO	0.3
VOC	0.1

III. AIR QUALITY ANALYSIS

According to the Maine Regulations Chapter 115, the level of air quality analyses required for a non-major source shall be determined on a case-by-case basis. Based on the information available in the file, the small emissions levels, and the similarity to existing sources, Maine Ambient Air Quality Standards (MAAQS) will not be violated by this source. An air quality analysis is not required.

ORDER

Based on the above Findings and subject to conditions listed below the Department concludes that the emissions from this above source:

- will receive Best Practical Treatment,
- will not violate applicable emission standards,
- will not violate applicable ambient air quality standards in conjunction with emissions from other sources.

The Department hereby grants Air Emission License A-746-71-B-R, subject to the following conditions:

- (1) Employees and authorized representatives of the Department shall be allowed access to the licensee's premises during business hours, or any time during which any emissions units are in operation, and at such other times as the Department

- deems necessary for the purpose of performing tests, collecting samples, conducting inspections, or examining and copying records relating to emissions.
- (2) The licensee shall acquire a new or amended air emission license prior to commencing construction of a modification, unless specifically provided for in Chapter 115.
 - (3) Approval to construct shall become invalid if the source has not commenced construction within eighteen (18) months after receipt of such approval or if construction is discontinued for a period of eighteen (18) months or more. The Department may extend this time period upon a satisfactory showing that an extension is justified, but may condition such extension upon a review of either the control technology analysis or the ambient air quality standards analysis, or both.
 - (4) The licensee shall establish and maintain a continuing program of best management practices for suppression of fugitive particulate matter during any period of construction, reconstruction, or operation which may result in fugitive dust, and shall submit a description of the program to the Department upon request.
 - (5) The licensee shall pay the annual air emission license fee to the Department, calculated pursuant to Title 38 MRSA §353.
 - (6) The license does not convey any property rights of any sort, or any exclusive privilege.
 - (7) The licensee shall maintain and operate all emission units and air pollution control systems required by the air emission license in a manner consistent with good air pollution control practice for minimizing emissions.
 - (8) The licensee shall maintain sufficient records, to accurately document compliance with emission standards and license conditions and shall maintain such records for a minimum of six (6) years. The records shall be submitted to the Department upon written request.
 - (9) The licensee shall comply with all terms and conditions of the air emission license. The filing of an appeal by the licensee, the notification of planned changes or anticipated noncompliance by the licensee, or the filing of an application by the licensee for the renewal of a license or amendment shall not stay any condition of the license.

- (10) The licensee may not use as a defense in an enforcement action that the disruption, cessation, or reduction of licensed operations would have been necessary in order to maintain compliance with the conditions of the air emission license.
- (11) In accordance with the Department's air emission compliance test protocol and 40 CFR Part 60 or other method approved or required by the Department, the licensee shall:
- a. perform stack testing to demonstrate compliance with the applicable emission standards under circumstances representative of the facility's normal process and operating conditions:
 1. within sixty (60) calendar days of receipt of a notification to test from the Department or EPA, if visible emissions, equipment operating parameters, staff inspection, air monitoring or other cause indicate to the Department that equipment may be operating out of compliance with emission standards or license conditions; or
 2. pursuant to any other requirement of this license to perform stack testing.
 - b. install or make provisions to install test ports that meet the criteria of 40 CFR Part 60, Appendix A, and test platforms, if necessary, and other accommodations necessary to allow emission testing; and
 - c. submit a written report to the Department within thirty (30) days from date of test completion.
- (12) If the results of a stack test performed under circumstances representative of the facility's normal process and operating conditions indicate emissions in excess of the applicable standards, then:
- a. within thirty (30) days following receipt of such test results, the licensee shall re-test the non-complying emission source under circumstances representative of the facility's normal process and operating conditions and in accordance with the Department's air emission compliance test protocol and 40 CFR Part 60 or other method approved or required by the Department; and
 - b. the days of violation shall be presumed to include the date of stack test and each and every day of operation thereafter until compliance is demonstrated under normal and representative process and operating conditions, except to the extent that the facility can prove to the satisfaction of the Department that there were intervening days during which no violation occurred or that the violation was not continuing in nature; and
 - c. the licensee may, upon the approval of the Department following the successful demonstration of compliance at alternative load conditions, operate under such alternative load conditions on an interim basis prior to a demonstration of compliance under normal and representative process and operating conditions.

- (13) Notwithstanding any other provision in the State Implementation Plan approved by the EPA or Section 114(a) of the CAA, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of any statute, regulation, or Part 70 license requirement.
- (14) The licensee shall maintain records of malfunctions, failures, downtime, and any other similar change in operation of air pollution control systems or the emissions unit itself that would affect emissions and that is not consistent with the terms and conditions of the air emission license. The licensee shall notify the Department within two (2) days or the next state working day, whichever is later, of such occasions where such changes result in an increase of emissions. The licensee shall report all excess emissions in the units of the applicable emission limitation.
- (15) Upon the written request of the Department, the licensee shall establish and maintain such records, make such reports, install, use, and maintain such monitoring equipment, sample such emissions (in accordance with such methods, at such locations, at such intervals, and in such manner as the Department shall prescribe), and provide other information as the Department may reasonably require to determine the licensee's compliance status.
- (16) The incinerator shall not exceed the maximum design charging rate of 800 lbs. Auxiliary fuel input to the primary and secondary chamber shall be natural gas.
- (17) A log shall be maintained recording the weight of waste charged, preheating time, charging time, afterburner temperature directly after charging and every 60 minutes after startup until, and including, final shutdown time. For facilities operating a chart recorder, the start time, date, and weight of waste charged shall be logged on the chart.
- (18) The secondary chamber shall be preheated as specified by the manufacturer to a minimum of 1200°F prior to the burning of any waste and shall be maintained at a minimum of 1600°F during the duration of the burn.
- (19) A pyrometer and 1/4 inch test port shall be operated and maintained at that location of the incinerator or refractory lined stack which provides sufficient volume to insure a flue gas retention time of not less than 1.0 seconds at a minimum of 1600°F.

- (20) NMC shall not exceed a particulate matter emission limit of 0.12 gr/dscf corrected to 12% CO₂ without the contribution of the CO₂ from the auxiliary fuel. Therefore, based on the maximum design combustion rate and continuous operation of the Class IV-A cremator, emissions shall be limited to the following:

<u>Pollutant</u>	<u>gr/dscf</u>	<u>lb/hr</u>
PM	0.12	0.63
PM ₁₀	---	0.63
SO ₂	---	0.12
NO _x	---	0.72
CO	---	0.32
VOC	---	0.04

- (21) Visible emissions from the incinerator shall not exceed an opacity limit of 10% (excluding water vapor) on a six (6) minute block average basis, except for no more than one (1) six (6) minute block average in a 3-hour period.
- (22) The incinerator combustion gases shall vent to a stack of at least 18 feet AGL.
- (23) The incinerator shall not operate more than 2080 hours per year. Compliance shall be demonstrated by operational logs documenting the total hours of operation for the calendar year.
- (24) The incinerator operator(s) shall receive adequate training to operate the incinerator in accordance with the manufacturer's specifications, and shall be familiar with the terms of this Air Emission License as it pertains to the operation of the incinerator.
- (25) Though it is not being required now, the installation and operation of continuous chart recording devices may become necessary to document compliance with the temperature requirements of this license. Should the Bureau of Air Quality determine that continuous recording devices are necessary, the licensee shall, within 120 days, demonstrate that continuous recorders have been installed and are operational.
- (26) NMC shall pay the annual air emission license fee within 30 days of **September 30** of each year. Pursuant to Title 38-353-A, failure to pay this annual fee in the stated timeframe is sufficient grounds for revocation of the license under section 341-D, subsection 3.
